Wonderful Baby Rambler Roses.

Mailing Size Plants 10 cents each: \$1.00 a dozen.

All our Roses are good, healthy, well rooted, mailing size plants. We guarantee plants to reach you in good condition.

We do not guarantee plants to grow.

Anna Muller—Much the same as the **Crimson Baby Rambler**, except in the color of its flowers, which are a shiny, brilliant pink produced in the greatest profusion in large clusters.

Baby Rambler. The original Baby Rambler, daddy of them all. It is in bloom all the time; flowers in large clusters of brightest crimson. It grows to a height of 18 inches and hides the plant with its bloom.

White Baby Rambler. This is surely a beauty and a great addition to the Baby Ramblers. Grows to a height of 20 inches and produces double pure white flowers in abundance. It has a fragrance similar to Hyacinths, of free, compact growth and very attractive. It produces a sheet of white bloom that is certainly a sight worth seeing.

Clothilde Soupert—Known the world over as one of the very best of all bedding Roses. The only rival of "Hermosa" as a bedder and market pot plant. The color effect is beautiful ivory-white, shading towards the center to bright silvery-pink. Everybody's Rose.

Le Ponceau—Dark red, blooms in large clusters. A choice variety.

Mlle. Cecile Brunner—It makes a handsome miniature Rose, coming in sprays of three to five buds, and combines in beautiful effect with so many other flowers in all kinds of floral work. It is a very prolific bloomer, and if carefully protected in the winter, should be a money maker, both outdoors and under glass. The bud and flower are both handsome. Color bluish, shaded light salmon-pink; distinct and desirable.

Mosella—Bears large flowers for this class; center of flower chrome-yellow; edges of petals shading out to creamy-white. A fine bedding Rose.

Mrs. William H. Cutbush—One of the very finest types of the Baby Rambler Roses. It produces in constant profusion throughout the entire summer its pleasing, delicate pink blooms in large trusses; also extra fine for pot culture.

Marie Pavie—Of good size; very full and double; borne in large clusters; white flushed with carmine; delightfully perfumed; a great bloomer.

Paquerette—This is one among the very first Baby Rambler Roses sent out. The flowers are very double and pure white. This Rose has many favorites.

Perle d'Or—Nankeen-yellow with orange center; very novel and beautiful. This Rose is dividing honors with "Mlle. Cecile Brunner" as a cut flower, being planted very largely for this purpose. A charming miniature Rose.

Primula—Considered by many to be the most popular of the Baby Rambler Roses. Grows to a height of two feet. Very hardy. Always in bloom. The color is the shade of the Lawson Carnation—beautiful carmine-pink.

Princess Marie Adelaide—A grand Baby Rambler Rose. Flowers of good size. The color is a bright pink, flushed with yellow; extra.

Schneewitchen, Snow Witch—An ideal sort for garden culture, having a round, compact habit, with very full trusses of evenly disposed flowers, which are perfect in form and semi-double. Color glistening ivory-white, with golden stamens; extra.

COPENHAGEN MARKET CABBAGE.

Earliest and Best Large Round or Flat Head Cabbage

The illustration is a good representation of this splendid new early cabbage, one our customers should not overlook. The ripening is early and uniform, maturing at one time and almost with Early Jersey Wakefield. Considering its early season, the heads are remarkably large, averaging ten pounds in weight. One of its chief features is compactness; its leaves, which are light green, are round, dish-shaped and fold tightly together in remarkably compact and solid form; it is so solid that many more plants can be grown on an acre than is possible with most sorts. It has few outer leaves, which permits close planting, and it grows close to the ground on a short stem. The entire crop can be harvested at one time and thus clear the field for other crops. The quality is exceptionally good. Earliness, ripening at one time, compact growth, large heads and high quality are features which have made this cabbage popular. This is the largest and handsomest cabbage exhibited early in September. Pkt. 5 cts.; ½ oz. 18 cts.; oz. 30 cts.; 2 oz. 55 cts.; ¼ lb. \$1.00; lb. 3.50.

COPENHAGEN MARKET CABBAGE--pkt. 5 cts.

DANISH SUMMER ROUNDHEAD CABBAGE.

As compared with Danish Ball Head it is of more robust growth, the heads are heavier and of equally fine quality. It is esteemed for the extreme solidity and great weight of the heads as well as for its superior keeping qualities, but it can be grown most successfully only in a comparatively cool location. "Danish Roundhead" has less outer foliage and is better able to resist blight. The heads average larger as Ball Head and a week or two earlier. The heads are unusually solid, and beautifully white when trimmed. They are splendid keepers when stored away for the late winter and spring, at which time the fine heads bring the highest market price. Our seed is grown for us by the best grower in Denmark. Pkt. 5 cts.; ½ oz. 10 cts.; oz. 20 cts.; ¼ lb. 65 cts.; lb. \$2.50.

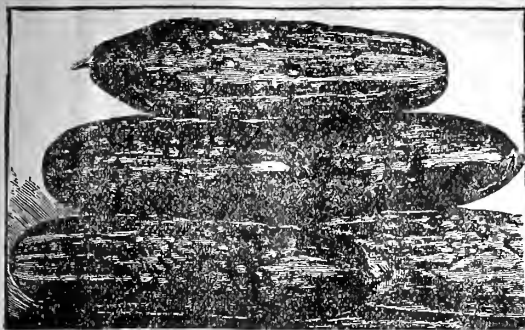

◎ VOLGA CABBAGE. ◎

Magnificent Large, Deep Flat Heads.

Excellent solid heads 10 to 12 inches in diameter and uniformly even. It is one of the most perfect growers and surest headers known. Tender, fine quality and unexcelled for fall or early winter use. Plants are of low growth with spreading leaves which shade the roots and keeps them moist. They will remain in perfect condition a long time without bursting. Pkt. 5 cts.; ½ oz. 10 cts.; oz. 18 cts.; ¼ lb. 60 cts.; lb. \$2.00

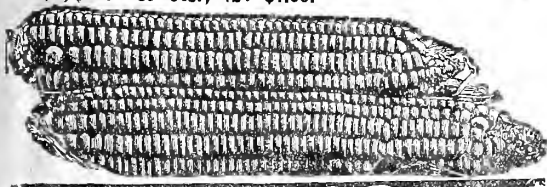

DANISH SUMMER ROUNDHEAD.

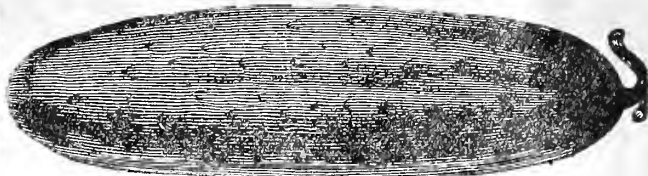

KLONDIKE Cucumber.

This is a hybrid sort of the White Spine type which holds its dark green color longer than most other sorts. Averages 6 to 7 inches in size; ends are quite square and it is about 2 inches thick. Its extreme earliness, combined with its prolific and hard quantities, makes it a very desirable variety for either market or private use. An excellent sort for slicing. When small, this variety is also an excellent pickling sort. Pkt. 5 cts.; oz. 15 cts.; ¼ lb. 35 cts.; lb. \$1.00.

Golden Bantam Sweet Corn--2 oz pkt. 5 cts.

EARLY FORTUNE Cucumber.

ONE OF THE BEST AND MOST POPULAR SHIPPERS.

Early Fortune Cucumber is the earliest and by far the best, rich dark green White Spine Cucumber on Earth. Also Best Cucumber for table, market or shipping purposes. It is the greatest producer of all varieties and at all stages of its growth; it is a model in shape, being the handsomest and most attractive cucumber ever grown.

In color it is a rich attractive deep green. This inviting color it retains during a much longer period of growth than any other variety, it is so regular in form, one so much like the other, growers marvel at the purity and truthness of type.

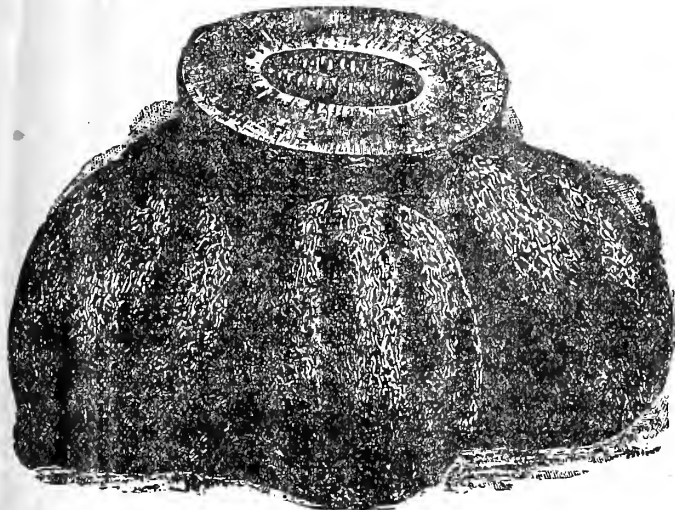

The quality is superb, flavor delicate, refreshing and delightful, entirely free from any bitterness, being fine grained, the flesh compact, it is exceedingly crisp and brittle, making it an ideal slicing Cucumber.

As a shipping Cucumber "Early Fortune" cannot be surpassed as it holds up in color and quality longer and better than any other variety. Pkt. 5 cts.; oz. 10 cts.; ¼ lb. 25 cts.; lb 85 cts.

GOLDEN BANTAM Sweet Corn.

The Most Popular Sweet Corn Ever Introduced.

Our improved stock of this wonderfully sweet early corn is selected with great care. This is not only an extra sort but harder than most other sorts and can be planted earlier. It is dwarf in growth, the stalks averaging four feet in height. The ears are from five to seven inches in length; but what it lacks in size is fully made up in its productiveness and quality. The small stalks can be grown closely together in the row and in good soil will produce two and three fine ears to a stalk. Color a rich golden yellow. Kernels sweet beyond comparison. Some of our best customers have remarked that it is the "only" early sweet corn for them. Pkt. 2 ozs. 5 cts.; ¼ pt. 8 cts.; ½ pt. 15 cts.; qt. 40 cts.; Postpaid.

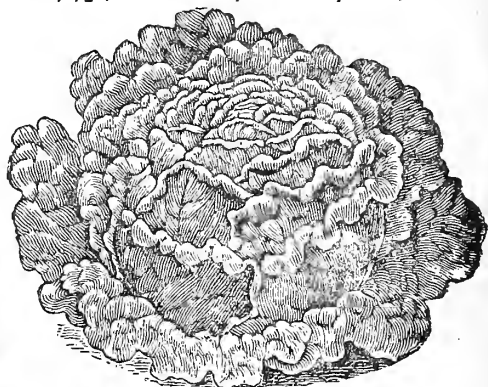

NETTED ROCK KING Musk Melon

One of the greatest melon growers of Rock Ford Colo., has been working for years to breed up a perfect melon—sweet, fine shape, and above all rust resisting. He claims to have reached the acme of success in the Nettled Rock King. This was produced by crossing a very sweet Japanese variety with a good shipping American variety. Our grower after trying every known sort pronounces these the best shippers—the best netted—the thickest meat—the sweetest—earliest and most productive sort grown. Pkt. 5 cts.; ½ oz. 8 cts.; oz. 15 cts.; ¼ lb. 40 cts.; lb 1.25.

A robust grower, resisting heat, slow to run to seed and seems to do well in all localities. Pkt. 5 cts.; ½ oz. 7 cts.; oz 12 cts.; lb. 85 cts.

RUST RESISTING ROCKY FORD MUSK MELON.

A Highly Developed Form of Rocky Ford. The old standard Rocky Ford has been for years the most popular melon grown. It was not without it faults, however. The new rust-resisting strain has overcome many of these and bids fair to become one of the standard shippers. Pkt. 5 cts.; oz. 10 cts.; ¼ lb. 25 cts.; lb. 90 cts

They are composed of many short-stemmed leaves, which are much thicker and heavier texture than any other Spinach in cultivation. They are heavily crumpled and blistered, of dark green color, and do not wilt or run to seed as quickly as other sorts, but will remain in good marketable condition a month longer than any other sort. On account of its thick, firm leaves it retains its freshness during the hot summer months, and is the best variety to be sown in the spring and also continuously at intervals all summer, so that this delicious healthful vegetable can be enjoyed not only during cool weather, but during the hot months as well. TEOSINTE.

THE NEW FODDER PLANT. RICH, LUXURIANT, HARDY. Here is a truly wonderful forage plant worthy of general cultivation. It comes to us from the rich, fertile plains of the Nile, where, travellers, tell us, the enormous yield of 300 tons of green fodder per acre is not uncommon. This is what it does in Egypt. What does it do in America? Almost equally as well. Give it a rich, warm, balmy soil, and it will yield from 100 to 150 tons of green fodder per acre. It is simply marvelous. Down in Georgia, in Florida, and North Carolina, its yield is all the way from 100 to 200 tons of green fodder per acre. It grows to a height of 18 feet in those states, while a single kernel will produce from 60 to 100 stalks of the most nourishing green fodder imaginable. Our test in the North gives it an average yield of about 50 tons of green fodder per acre. Price postpaid, oz 10 cts., ¼ lb. 25 cts., lb. 85 cts. By express or freight not prepaid, lb. 70 cts.

Choicest Varieties of Flower Seeds.

We are Growers of Flower Seeds. We import varieties which can not well be grown here. Our long experience as growers and dealers enables us to procure the Best Seeds from the most reliable growers and thus offer a better quality than small dealers who buy second handed.

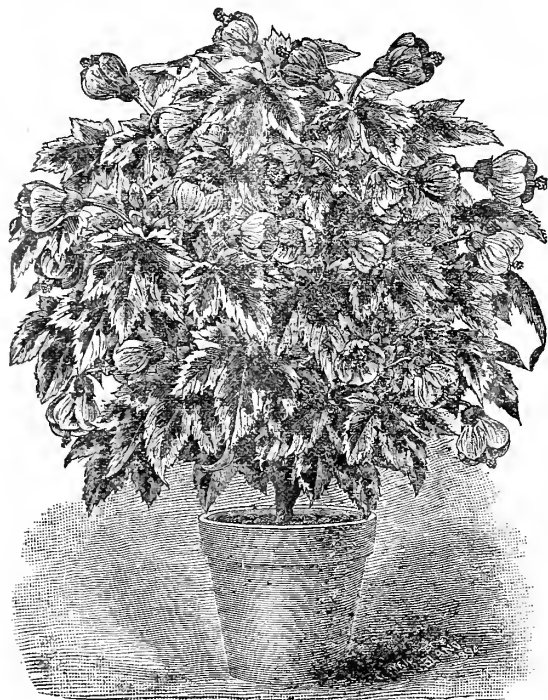

Flowers usually do best in a rich light garden soil not too wet or too dry. Decomposed manure is beneficial to nearly all plants. Asters, Pansies and most bulbs, etc., like plenty of moisture (a rich soil well watered), while Portulaccas will not start till weather is warm. Most plants wanted early can be started in fine soil in a sunny window in the house, great care being taken to keep moist and warm. Some hardy seeds will start well outdoors if sown early, but many will rot if earth is cold and wet. Nice mellow beds can be prepared outside for the hardier seeds when weather is warm and they can be transplanted from these when large enough.

Annuals are plants which bloom first season from seed and then perish. Those like Balsams, Nasturtiums and Zinnias, which are easily killed by frost, are called half-hardy annuals. Seeds of these should be sown, if wanted for early, in the house, but most sorts will do better if sown outside in a nicely prepared bed and transplanted to rich soil where wanted. All plants should be kept free from weeds, not crowded, and be well cultivated.

Perennials are our hardy plants which live year after year. Tender Perennials must be kept in house during winter. Hardy Perennials are such plants as Hollyhocks, Sweet William, Rocket, etc. Most of these will not bloom till second season. These and biennials are often benefited by a covering of hemlock boughs, straw or something which will protect from the sun and not smother plants.

Biennials produce plants first season which blossom, mature, seeds and die the second season, such as Canterbury Bell, Digitalis, etc. They require about the same treatment as perennials, and like them are often benefited by a slight covering of evergreen boughs in winter and spring. These should hold the snow and keep sunshine off, but not smother the plants.

Greenhouse Seeds require the greatest care and should be carefully sown in a box or flower pot in light, fine earth, kept at a temperature of about 70 degrees. Always remember they need to be moist (not wet) and warm. A pane of glass over a flower pot or a wet cloth or paper. When well up, transplant care-
